**Triggers that may worsen
gMG symptoms include:**

- Certain medications
- IV magnesium
- Certain antibiotics
- Certain heart/ blood pressure medications
- Certain general anesthetics and paralytics
- Botulinum toxin
- Stopping or reducing medications used to treat MG
- Illness or infection
- Heat
- Stress from trauma or surgery

Please contact a OneSource™ representative for more information regarding gMG at **1.888.765.4747** or email us at **OneSource@alexion.com**.

I have been diagnosed with generalized myasthenia gravis (gMG) and may be having an exacerbation or myasthenic crisis, which requires urgent care.

gMG is a chronic autoimmune neuromuscular disease that causes weakness in the muscles.

A myasthenic crisis is a **potentially life-threatening** complication of gMG. Respiratory failure occurs due to weakness of respiratory muscles, and mechanical ventilation is required.
